Process for preparing new piperazine derivatives further acid addition and quaternary salts thereof

Abstract

The invention relates to a process for preparing new piperazine derivatives of the general formula // further acid addition and quaternary salts thereof; in the formula

R1 stands for a C1-C5 alkyl group optionally substituted at the terminal of the chain with a phenyl, trimethoxy-phenyl, phenoxy, methoxy-cyclohexyl or a heptamethylene-imino group; allyl group; phenyl group optionally substituted with one or several halogen atom/s/, C1-C4 alkyl group/s/ or a C1-C4 alkoxy, trihalo-methyl or allyl group; or a C2-C5 alkoxy-carbonyl group,

R2 stands for hydrogen atom or a C1-C4 alkyl group and

R3 stands for a furyl, 9-xanthenyl or a C5-C6 cycloalkyl group substituted with a C1-C4 alkoxy group.

Compounds of the general formula // are prepared by reacting a compound of the general formula // - wherein R1 and R2 have the above meanings - is reacted with a carboxylic acid of the general formula // - wherein R3 has the meaning as above - or with a derivative capable of acylation thereof and the product obtained - when desired - is transformed into an acid addition or a quaternary salt.

The compounds of the general formula // possess coronary dilating and arrhythmia inhibiting effects.
